After reviewing the design of our website the feedback we are given is as follows:

Make Posts

“The “make posts” button should be fixed on the newsfeed page.

We could add a div so that the posts can move when managers and admins scroll while the button stays fixed on the screen so that they do not have to go all the way to the base of the page to make a post.”

Our group agreed that this is valid advice, and decided to implement this on our website. We plan to have a fixed “make posts” button at the base of user screens for managers and admins to decrease their kinematic load and prevent excess scrolling when they want to make a post.

Header and Logo

“Our logo should be contrasted bigger and we should change the colour to a lighter colour to help it stand out more for users.”

We agreed that we should add an image to our logo to help users identify it and navigate the website better, however we have decided to keep the colour the same so that it doesn't blend in with the navigation bar or the footer links.

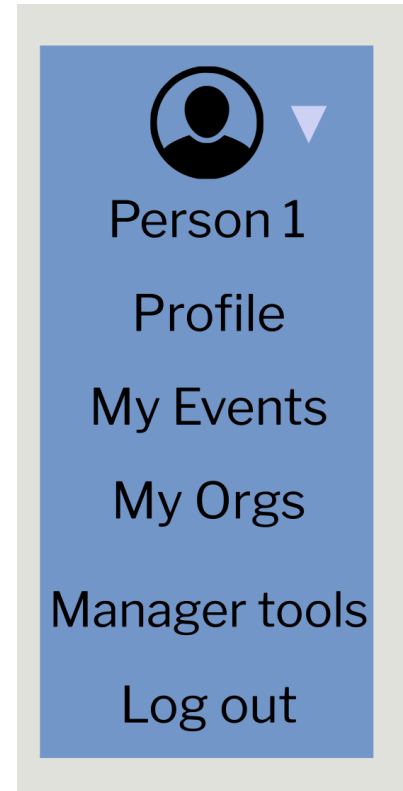

We agreed that we should add an image to our logo to help users identify it and navigate the website better, however we have decided to keep the colour the same so that it didn't blend in with the navigation bar or the footer links.

Manager Settings

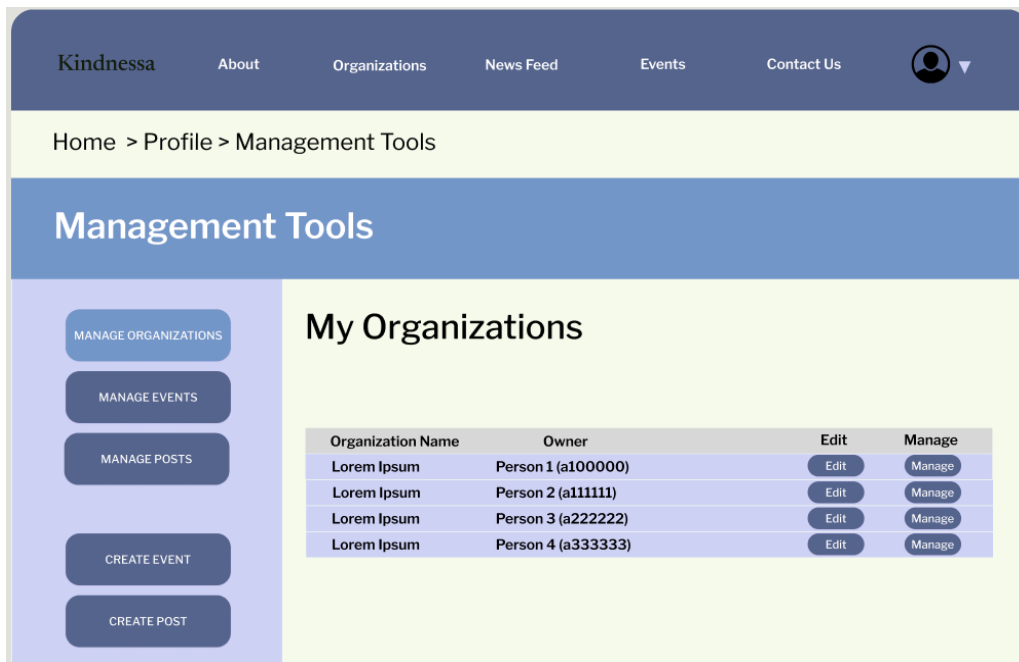

“Manager and admin tools are too hidden, making it hard for managers and admins to manage their organisations and the website. We should add a link from the navigation bar or the drop down profile menu, for managers to directly access their manager tools and reduce kinematic load.”

We agreed that managers and admins had too many steps required to navigate to their tools. We decided to add manager tools to the drop down menu so they could access them faster without having too much information to the navigation bar.

Upon further reflection, our group also decided to edit our manager and admin side menu as well, to make it more understandable and easy to navigate. We grouped “create” and “manage” buttons together for a clearer side menu.
